Distribution Box Sensor Protection Device

Overview

Reliable protection and easy handling Our sensor actuator boxes are equipped with metal threaded rings as standard. This ensures a particularly secure screw connection.

Key Takeaways

Distribution box sensor protection devices safeguard sensors and actuators while enabling reliable signal and power transmission in industrial environments.

Overview

Distribution box sensor protection devices, often called sensor actuator boxes, are designed to collect, distribute, and protect signals and power from multiple sensors and actuators in industrial automation, machine construction, and intralogistics applications. They provide a centralized point for wiring, reducing complexity and improving reliability in harsh environments.

Key Features

Protection Class: Many boxes offer IP67-rated encapsulation, ensuring dust-tight and water-resistant operation. Connection Types: Common connections include M8 and M12 sockets, often with push-pull or screw mechanisms, and collective outputs via M23 connectors.

Explosion-

Proof Options: Certain models, like M12 EX distribution boxes, are ATEX- and IECEx-certified, suitable for intrinsically safe circuits in hazardous zones up to Zone 1. Modularity: Boxes can be customized with AND/OR circuits, multiple signal channels, and inclined M8 outlets for better accessibility. Quick Installation: Features like PUSH IN connections and quick-connect contours allow fast, secure, and efficient cabling in the field.

Durability: Constructed from high-quality plastic or metal, these boxes withstand mechanical stress and environmental challenges.

Applications

Industrial Automation: Bundling sensor and actuator wiring for machines and production lines. Intralogistics: Managing signals in automated warehouses and conveyor systems. Hazardous Environments: Safe transmission of intrinsically safe circuits in explosive atmospheres.

Decentralized Power Distribution: Using FieldPower® modules to distribute power, signals, and data flexibly.

Benefits

Simplified Wiring: Reduces the number of PLC inputs by combining multiple sensor signals. Enhanced Safety: Protects sensitive electronics from environmental hazards and electrical faults.

Plug-and-

Play Operation: Facilitates fast installation and maintenance. Compliance: Certified according to international standards for safety and reliability. Distribution box sensor protection devices are essential for efficient, safe, and reliable industrial operations, providing both signal management and protection in a compact, modular form.

They are widely used wherever robust, decentralized, and explosion-proof sensor-actuator connections are required.
