# Odf frame patch panel

## Overview

An optical Distribution Frame (ODF) or patch panel is the starting point for optical cables, most commonly found in rack cabinets in Head End (HE)/Central Office (CO)/Point of Presence (POP)/Data Centre (DC) or smaller cabinets or enclosures. Where Do ODF and Fiber Patch Panels Fit in a Modern Fiber Network?

To understand the. A Fiber Patch Panel is a centralized device for terminating, organizing, and connecting fiber optic cables. It provides a neat, structured way to route and label fiber lines, simplifying both installation and future reconfigurations. The ODF consists of a metal housing, cable entry ports. A fiber optic patch panel (also known as fiber distribution panel, fiber patch bay, optical patch panel, or fiber termination panel) is a modular, rack-mountable unit designed for high-density fiber termination, organization, and cross-connection in structured cabling environments.
