Optical modules required for A800

Overview

With the rapid expansion of high-speed networking and advanced AI computing power, the NVIDIA A800 and the 800G optical module have become two fundamental components in modern data centers.

Key Takeaways

The NVIDIA A800 40GB Active GPU requires high-speed 800G or compatible InfiniBand optical modules for data center interconnects, as it does not include display outputs and is intended for compute acceleration.

Key Considerations

The NVIDI

A A800 40GB Active GPU is designed as a compute accelerator and does not have display outputs, meaning it relies on companion GPUs for display functionality. For high-performance data transfer between GPU servers or switches, optical modules are essential, particularly in 800G or 400G InfiniBand networks.

Recommended Optical Modules800

G DR8 ModulesUses 100G PAM4 with 8-channel single-mode parallel technology. Requires 16 optical fibers (8 Tx, 8 Rx). Transmission distance: up to 500 meters over single-mode fiber.

Ideal for data center interconnections and 800G-800G, 800G-400G, or 800G-100G links. 800G PSM8 ModulesUses CWDM technology with 8 optical channels, each delivering 100Gbps. Transmission distance: up to 100 meters.

Suitable for long-distance transmission and fiber resource sharing. 800G 2DR4 ModulesProvides 2x 400G-DR4 interfaces via 2 MPO-12 connectors. Supports 500-meter transmission and allows connection to 400G DR4 transceivers without optical breakout cables.

Infini

Band OSFP-800G-SR8 ModulesCore component for high-performance InfiniBand networks. Ensures zero-packet-loss, non-blocking, and low-error links between GPU servers and IB switches. Installation and maintenance affect overall link quality and network performance.

Installation and Network Integration

Ensure adequate spacing around the chassis (≥20 cm) for heat dissipation. Use grounding and ESD precautions to protect the GPU and optical modules. Optical modules should be installed in standard 19-inch cabinets with proper airflow and grounding.

Verify compatibility with the network switch or companion GPU to ensure full 800G throughput.

Summary

For the NVIDIA A800 40GB Active GPU, 800G optical modules such as DR8, PSM8, 2DR4, or OSFP-800G-SR8 are recommended depending on the network architecture and transmission distance. These modules enable high-speed, low-latency interconnects in data centers, supporting large-scale AI, HPC, and data science workloads while the A800 serves as a compute accelerator.
