# Up distribution box

## Overview

A UPS distribution box is a critical electrical component that manages and distributes power from an uninterruptible power supply (UPS) system to connected equipment. These boxes ensure reliable power delivery during outages and are widely used in commercial, industrial, and data center. Leading suppliers of electric power distro boxes for venues and events worldwide built to order Bespoke distros If you can think of it we can build it. Sign up and save open a trade account today! Electrical Power Distribution, Cables & Y-Cords. All available for next day delivery We manufacture. With the compact parallel switch panel, users can set up a parallel system without needing to restructure an existing low-voltage main distribution system. Combining up to 24 separately protected, ready-made circuits in an output distribution unit built into a parallel switch panel, the PDB. The distribution box (DB box) helps safely and efficiently distribute electrical power. It plays a crucial role in ensuring that sensitive equipment — like servers, medical devices, or control systems — receive clean, uninterrupted. A distribution board (also known as panelboard, circuit breaker panel, breaker panel, circuit breaker, electric panel, fuse box or DB box) is a component of an electricity supply system that divides an electrical power feed into subsidiary circuits while providing a protective fuse or circuit.
